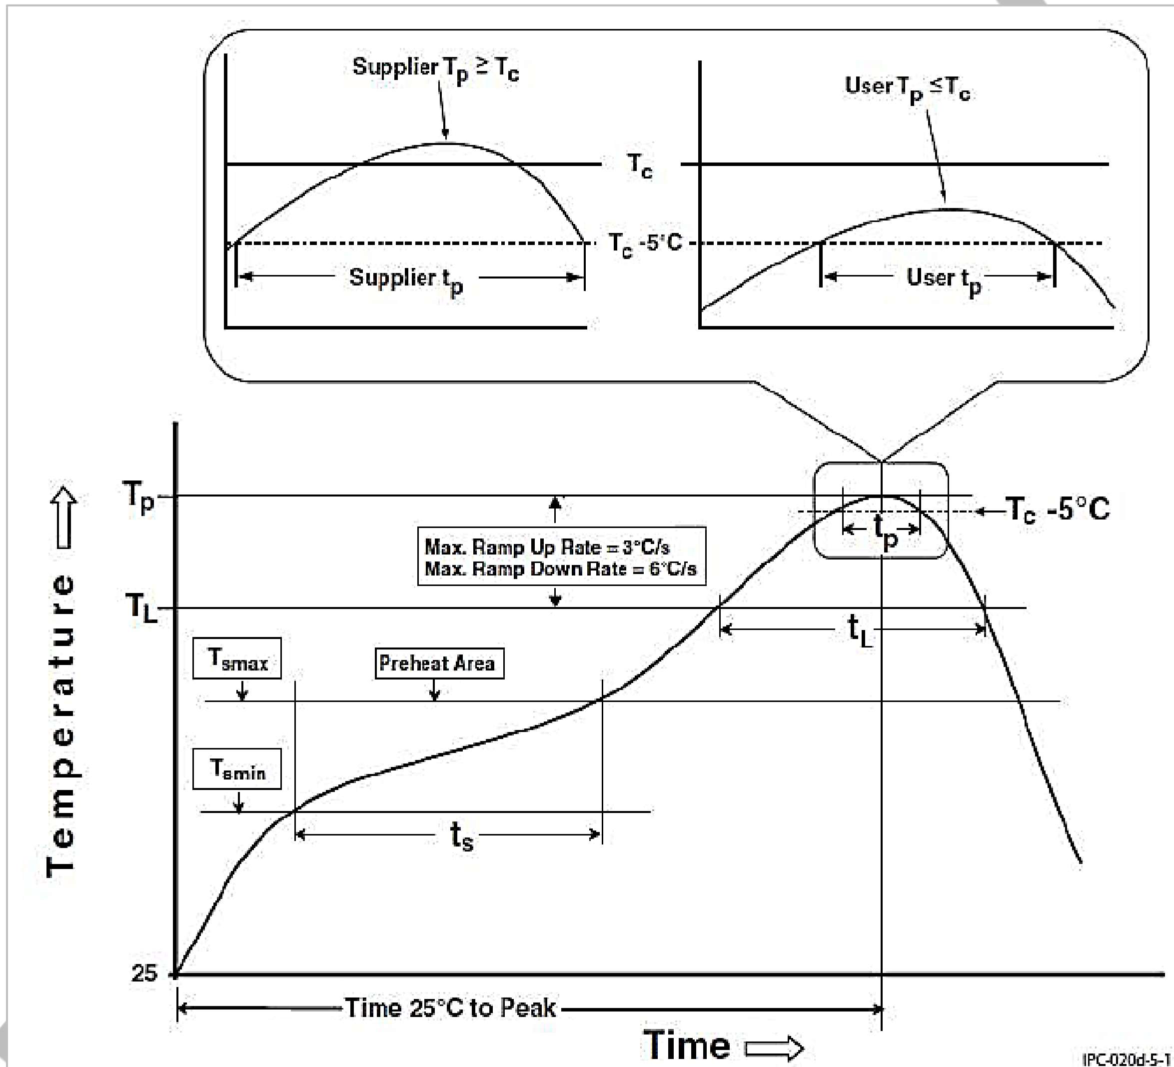
## 4. Reflow Soldering Profile

**Recommended Reflow Soldering Condition (IPC/JEDEC J-STD-020D.1)**



### ➢ Table 6 Recommended Reflow Soldering Condition

| Profile Feature | Pb-Free Assembly |
| --- | --- |
| **Preheat/Soak**<br>Temperature Min ($T_{smin}$)<br>Temperature Max ($T_{smax}$)<br>Time ($t_s$) from ($T_{smin}$ to $T_{smax}$) | <br>150°C<br>200°C<br>60-120 seconds |
| Ramp-up rate ($T_L$ to $T_P$) | 3°C/second max. |
| Liquidous temperature ($T_L$)<br>Time ($t_L$) maintained above $T_L$ | 217°C<br>60-150 seconds |
| Time ($t_p$)* within 5°C of the specified classification temperature ($T_c$)**, see Reflow Soldering Profile above. | 30* seconds |
| Ramp-down rate ($T_p$ to $T_L$) | 6°C/second max. |
| Time 25°C to peak temperature | 8 minutes max. |

**($t_P$)*** The highest temperature that an individual package body reaches during MSL classification.

**($T_C$)**** The maximum body temperature at which the component manufacturer guarantees the component MSL as noted on the caution and/or bar code label (per J-STD-033).

**30* seconds** Reflow profiles in this document are for classification/preconditioning and are not meant to specify board assembly profiles. Actual board assembly profiles should be developed based on specific process needs and board designs and should not exceed the parameters in **Table 5**.
For example, if **Tc** is 260 °C and time tp is 30 seconds, this means the following for the supplier and the user.
For a supplier: The peak temperature must be at least 260 °C. The time above 255 °C must be at least 30 seconds.
For a user: The peak temperature must not exceed 260 °C. The time above 255 °C must not exceed 30 seconds
